

Data intelligence, not data management.

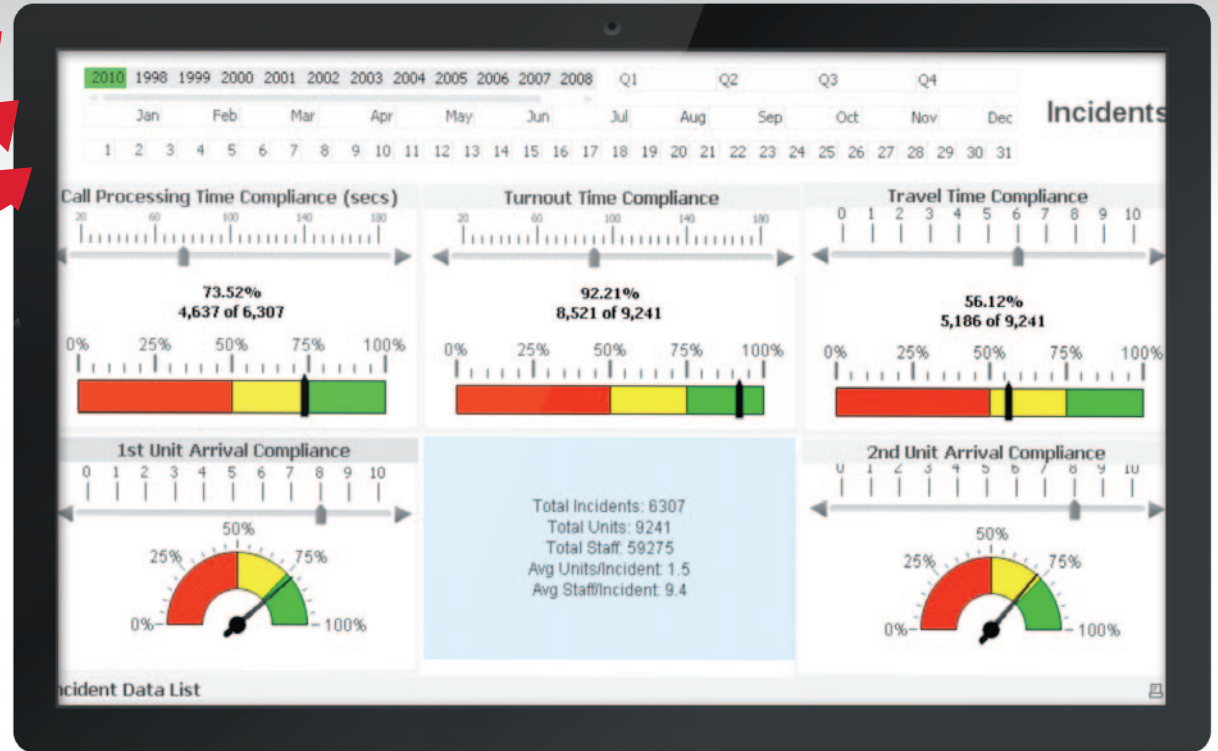

Another revolutionary product from the world's leading provider of fire and EMS software.

FH[®]Analytics

FH Analytics opens up a whole new dimension of tools for intelligent decision making. Now fire departments can use this multidirectional data analysis tool to evaluate the data collected from all modules of FH Software, gleaning critical decision-making and planning intelligence faster and more readily than ever before. The easy to navigate dashboard interface provides real time information at a glance, giving immediate insight into staff training and equipment needs, turn out and reaction times, incident compliance rates, standards of coverage, and more.
