FH® Medic

ePCR DESIGNED FOR THE WAY YOU WORK.

FH Medic, the new ePCR from FIREHOUSE Software, enables you to capture complete and accurate patient care data in the field, quickly and easily from your laptop or tablet PC. Set up and manage FH Medic from the cloud. Configuration and application updates are automatic, and QA/QC is built in. FH Medic improves patient safety and quality control while dramatically simplifying your record keeping.

FH® **FIREHOUSE** Software®

A Xerox Solution

FH® Medic

With so many powerful features, **FH** Medic is the smartest and simplest way to integrate ePCR and your **FH** Software database.

Flexible & Efficient

We have designed FH Medic to be flexible, efficient and easily adaptable to effectively meet the needs and reporting requirements of your department. Customizable Quick Actions can be designed around local area protocols. Patient Summary allows report writers to view all vitals, procedures, and medications in a single window. Click individual or "show only" buttons to view specific data such as call times, vitals, treatment, or assessments. Details of each record are easily viewed by a simple double click. And to add to efficiency, a signature can be captured at any time with customized text disclaimers.
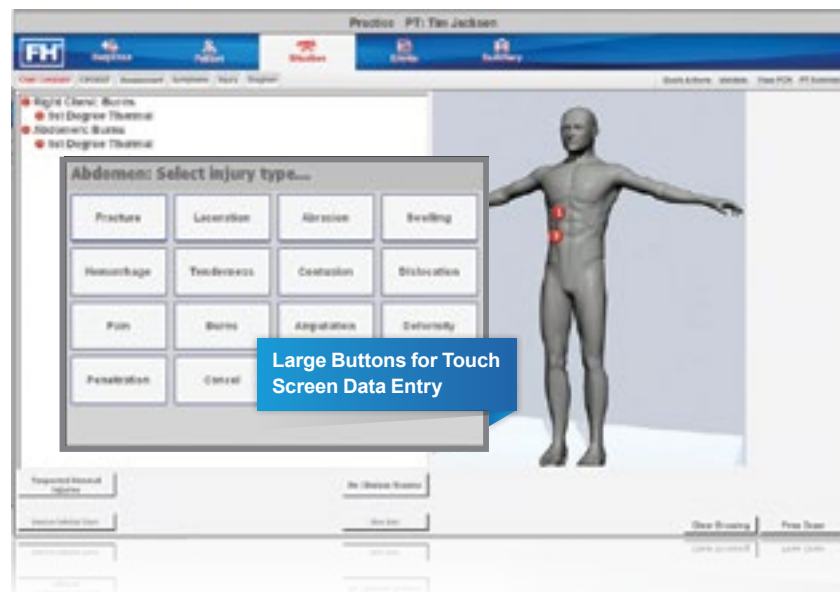

Seamless Integration

FH Medic is a PC based product that is integrated with FH. In conjunction with FH7, it provides support to meet the NEMSIS specification. The option to synchronize a complete ePCR from the FH Medic cloud to FH is available with a seamless integration.

Simple & Versatile

FH Medic has the simplicity and versatility you need to keep things running smoothly: Data elements to be included in a patient record can be defined based on department, local or state user-defined protocols, and the display order can be specified for easy data entry. Press a single button to add a procedure or a medication record. Use the patient lookup option to quickly fill in standard patient demographic information, such as patient past history and insurance.

Web Based Features

Your ability to ensure quality, safety, security and accessibility is enhanced with various web based features and setup. The QA/QC feature enables reports to be routed back to medics in the field for correction or clarification. The FH Medic cloud user setup can allow hospitals to view ePCR information as it is being entered. Patient reports can also be faxed to the hospital from the field or within the cloud. Email notifications can be setup to send notifications based on various criteria or situations.

Large Buttons for Touch Screen Data Entry

- Designed for use on Tablet PCs
- Work with the cloud in connected or disconnected modes
- Simple cloud-based setup & management, with built in QA/QC
- Optional CAD integration with FH CAD Monitor
- Fax from cloud option-send reports directly to hospital
- Easily transfer PT care reports from one unit to the other
- Integration with cardiac monitors, Zoll, Lifepak, & Medtronic
